SRI SAI RAHUL BONALA

Product Designer & AI Builder

+91-7989367960 | rahulbonala06@gmail.com | linkedin.com/in/sri-sai-rahul | rahulbonala.me

SUMMARY

Product Designer with ~4 years designing AI-native products and writing the code that ships them. Builds AI agents, tools, and workflows that automate the design process, and has shipped 4 live AI products (BestAnswers.AI, Pay Grade AI, Stepforge, BYOC). Systems thinker who builds reusable design systems across 3 regions and 3 client brands, turns friction into tools, and teaches AI workflows so others ship independently. Delivered 60% less manual processing, 80% faster workflows, 70% fewer support tickets.

SKILLS

AI Design Automation: AI Agents & Multi-Agent Systems, Agentic Workflows, Design-to-Code Automation, LLM Integration (Gemini, Llama, Mistral), AI Copilot & Chat UIs, Prompt Engineering, AI Guardrails, AI Workflow Training
AI Tools: Claude, Cursor, Lovable, Figma AI, Figma Make, ChatGPT, Gemini, Copilot, Midjourney
Product Design & UX: Interaction & Visual Design, User Research, Usability Testing, Journey Mapping, IA, Design Systems, Rapid Prototyping, Prototyping in Code, Motion & Micro-interactions, WCAG 2.1 AA, Data Visualization
Design Tools: Figma (Advanced), FigJam, Framer, Webflow, Storybook, Lottie, Adobe XD, Sketch, Photoshop, Miro
Engineering: React, Next.js, TypeScript, JavaScript, Node.js, Python, Java, HTML5/CSS3, Tailwind, Supabase, Vercel, Git, REST APIs
Collaboration: Agile/Scrum, Design Thinking, Workshops & Training, Stakeholder Management, Jira, Confluence

EXPERIENCE

AI Specialist, Product Designer & Developer | Gintic.ai **Apr 2026 – Present**

- Own design and front-end build (Figma to Next.js, React, TypeScript) for an AI-powered accounts payable platform; reused one component system across **3 client brands** (Flipkart, Curefoods, Livspace), merging **300+** features to production
- Built the team's AI tooling and AI-assisted Figma-to-code workflows, so a small team ships features from concept to production React without handoff loss
- Ran an AI-native design process (Claude, Cursor, Lovable, Figma AI) to explore more directions per feature and prototype them in code, shipping to a live platform with production traffic throughout
- Engineered an AI invoice copilot with Oracle ERP integration, permission-gated line edits, and click-to-highlight PDF previews, reducing manual invoice processing effort by **60%**
- Designed and built AI agent experiences (vendor reconciliation, match and data agents) from Figma into pixel-accurate production UI, improving task turnaround by **40%**
- Shipped the full Livspace app (with an AI chat interface) from Figma to product in **8 days**, speeding client onboarding by **70%**
- Led the Curefoods migration, rebuilding auth and OTP onboarding with UUID-based RBAC and closing **100%** of VAPT findings

UI/UX Designer & Developer | Smiths Detection **Jan 2023 – Apr 2026**

- Designed and built (React, Java, Python) service consoles used daily by maintenance engineers across Europe, APAC, and North America, reorganised around engineer tasks; reduced maintenance time by **80%** and improved diagnostic accuracy
- Built the consoles on a shared, reusable component system across **3 regions**, meeting WCAG 2.1 AA on every shipped surface
- Automated a recurring manual reporting task in Python, cutting a **~6-hour** job to **~15 minutes** and removing copy-paste errors
- Led a full visual and interaction redesign, driving a **95%** rise in positive user feedback (FY25) and an **85%** lift in global CSAT
- Translated research into end-to-end journeys across **3 enterprise projects**; validated motion-rich prototypes through **3 usability tests**, cutting support requests by **70%**
- Led client-facing engagements in Wiesbaden, Germany, running product demos, feedback sessions, and end-user training

AI PROJECTS (BUILT & SHIPPED)

- **BestAnswers.AI (Live, solo):** Multi-agent consensus engine where 4 AI personas debate in parallel across Gemini, Llama, and Mistral; a meta-judge merges the strongest reasoning and keeps disagreements visible to reduce hallucinations
- **Pay Grade AI (Live, YouTube automation):** Built Grokbot, a fully automated AI content pipeline that turns one topic command into a researched, edited, voiced-over video and auto-uploads it to YouTube, in a hand-crafted style
- **Stepforge (Live, solo):** Automated résumé-to-portfolio website generation with **33** reusable designs; deterministic parser plus opt-in Gemini that cannot add facts (**~89%** retention on a 46-résumé test set), guarded by CI accessibility gates
- **BYOC: SDLC Agents (Live):** AI agents carry work through plan, design, build, test, and ship, with a real-time cost configurator and a metro-map pipeline tracker for each build
- **Zero to Live (AI workflow teaching):** 1:1 sessions taking a non-coder's idea to a live website in one hour with free AI tools; each leaves with a reusable playbook and prompts
- **Rapid prototyping:** Took 4 product concepts (Bar App, Dosth, Waggle, iUpgrade) from Figma prototypes to live web apps

More projects, case studies, and detailed work are available in my portfolio: rahulbonala.me

EDUCATION

SASTRA University, Tamil Nadu | B.Tech in Electronics & Instrumentation Engineering | CGPA: 8/10 **Sep 2019 – May 2023**
